

Which Slip-rating do I need?

Stellmann provides a wide range of slip-ratings which provide the perfect balance between safety and maintenance. Use the guide below to select the right slip-rating for your installation projects. In case of any questions please reach out to us.

Stellmann Non-Slip Clear P3 Soft

P3 SOFT can be used as a general, premium quality sealer and non-slip coating for areas not frequently exposed to water. Only use P3 Soft for shoe-areas as it is not intended for barefoot areas.

- Shopping malls
- Lobbies (approx. 1 meter away from the entry area)
- Food courts
- Office walkways and toilet facilities
- Residential living rooms

Stellmann Non-Slip Clear P3

P3 provides excellent slip-resistance for indoor areas, both walked on barefoot and with shoes.

- Showers (residential, healthcare and hospitality)
- Bathroom floors
- Residential kitchens
- Interior stairs
- Toilet and bathroom facilities
- Interior entry areas (directly adjacent the entry/door)
- Communal changing rooms

Stellmann Non-Slip Clear P4

P4 provides excellent slip-resistance for all outdoor areas, both walked on barefoot and with shoes.

- Entry areas
- Walkways and footpaths
- Pedestrian crossings
- External ramps including driveways
- Balconies and verandas
- Communal shower rooms or showers where extra slip-resistance is required
- Serving areas behind bars in hotels and pubs
- Commercial kitchens (P5 in Australia)

Stellmann Non-Slip P5 Particles

P5 provides the highest slip-resistance level and can be added to our P4 coating (see TDS). It should only be used for areas such as:

- Commercial kitchens exposed to grease
- Outdoor sloping areas steeper than 1 in 14
- Pedestrian crossings
- External ramps including driveways
